
FOR MANAGEMENT COMPANIES AND PROFESSIONAL FIRMS IN MAURITIUS

When someone asks for the record, how long does it take?

Management companies, law firms and professional practices are used to producing evidence on demand. Regulators ask. Auditors ask. Clients running their own due diligence ask. The firm's own employee records are usually the least organised part of that.

01 Employee information sits in places that were never meant to hold it

Contracts in one folder. Identity documents in another. The leave sheet with whoever maintains it. Signed acknowledgements in email. Nothing is missing exactly — it is just not in one place, and it is not current.

02 Policy acknowledgements exist, but not as evidence

The policy went out and people accepted it. Proving **which version** a named employee accepted, and on what date, is a different problem — and it only surfaces when someone is already asking.

03 Information requests arrive with a deadline attached

A request from a regulator, an auditor or a client is not the moment to start assembling employee files, chasing signatures and reconstructing who was employed when.

04 The administration sits with Finance, Company Secretarial or Operations

Most firms of this size have no HR manager and are not ready to hire one. The work still lands somewhere — usually on someone who already has a full role, and who also has access to everything.

TeamFrame is an HR system built for firms in exactly this position. It holds the employee record and keeps the evidence current, so producing it is not a project.

Prepared by an HR practitioner with fifteen years running people operations across the UAE, Mauritius and international banking — including as the sole HR lead at a UAE company of the size this is built for.

One system for everyday HR administration

TeamFrame holds the authoritative employee record and runs the routine administration around it. It is deliberately not a large HR platform — there is no recruitment pipeline, no performance ratings and no analytics suite to configure before it is useful.

WHAT IT COVERS

People

Employees and contractors: employment type, position, department, location and reporting line.

Documents

Requested from the employee, uploaded securely, stored privately and monitored for expiry.

Employment changes

Manager, position, department, location and contract changes, with an effective date and full history.

Onboarding

Repeatable packs with owners and due dates, generated when someone is added.

Policies

Uploaded and versioned, published to the right people, acknowledged against the version.

Offboarding

End date, handover, access removal and asset return as tracked steps; the position is released.

Leave

Types, allocations, balances, requests, conflict checks, approval routing and absence history.

Probation & check-ins

Reviews open at the right time; a short check-in reaches the employee at around thirty days.

Self-service

Employees see their own profile, tasks, documents, policies and leave. Managers act for direct reports only.

FIVE THINGS IT DOES THAT MOST SYSTEMS AT THIS SIZE DO NOT

1

A task cannot be closed without the evidence

"Upload the signed contract" stays open until a document is actually there. Marking it done is not an option. What the system shows as complete is complete.

2

Document expiry is monitored, not remembered

Every document with an expiry date is tracked. The renewal is raised before the date, the replacement satisfies the requirement automatically, and the previous version stays on file.

3

Acknowledgements are recorded against the policy version

Not "acknowledged the handbook" — **acknowledged version 3, on a date**. Superseded versions keep their history and stop generating obligations.

4

Salary and private files are separated from general HR access

Someone can administer people, leave, onboarding and documents **without seeing compensation or private employee files**. Payment and bank details sit separately again. Managers see their direct reports and no further.

5

The work appears without being scheduled

Adding an employee generates the onboarding. A start date sets the probation review. An expiry date raises the renewal. A departure generates the exit steps. You see decisions and exceptions, not a list of things to remember.

PRODUCT SCREENSHOT — PLACEHOLDER 1 OF 2

Document requirements with expiry dates and an open, unclosable task

Capture at 1440 × 900, 2× DPR, full-width crop, on a seeded demo tenant. Show at least one document expiring soon and one requirement that cannot be marked done.

How it is set up

Four things worth being clear about before any walkthrough, because they decide whether TeamFrame is the right shape for your firm.

Configured for your organisation	Company details, working days, public holidays, leave defaults, positions and reporting lines, and your existing people are loaded before you start. You do not begin with an empty system.
A dedicated environment you control	TeamFrame is deployed as a separate installation for your organisation, on infrastructure held in your name. Your employee records are not kept in a shared database alongside other companies' staff. The installation is yours, and you can take your data with you at any time.
Your payroll arrangement does not change	TeamFrame does not run payroll and does not generate WPS or SIF files. Your payroll provider, PRO or accountant continues exactly as now. TeamFrame keeps the employment facts they need — starters, leavers, employment and salary changes, unpaid leave — and produces a structured handover file.
Implementation is done with you, not to you	A short setup workbook covers company details, people, holidays and access. We validate it, prepare the environment, import your people, configure who sees what, verify it together and hand over.

WHAT TEAMFRAME IS NOT

It is not a recruitment or applicant-tracking system. It does not run payroll, tax filing or payslips. It does not do performance ratings, reviews or goals, engagement surveys, time and attendance, or shift scheduling. **If any of those is the problem you are trying to solve, TeamFrame is not the right system and we will say so early.**

PRODUCT SCREENSHOT — PLACEHOLDER 2 OF 2

Access settings — salary and private documents hidden from an administrator

Capture at 1440 × 900, 2× DPR, on a seeded demo tenant with realistic names. Show one non-Full-Access profile where People Operations is granted and Salary is set to None.

NEXT STEP

Book a TeamFrame walkthrough

Thirty minutes on a live system with real records — not slides. We start from how your firm handles documents, leave and policy sign-offs today, and show only the parts relevant to it. If it is not a fit, we will tell you.
